

Decker: Double Check with Heterogeneous Knowledge for Commonsense Fact Verification

Anni Zou, Zhuosheng Zhang, Hai Zhao*

annie0103@sjtu.edu.cn

Shanghai Jiao Tong University

Background

- **Commonsense fact verification**: verify through facts whether a given commonsense claim is correct or not
 - derive solely from question & implement reasoning on top of it
- Current Methods:
 - Direct use of knowledge preserved in ore-trained language models (**PLMs**) **parameters**
 - Resort to external knowledge bases, either **structured or unstructured knowledge**

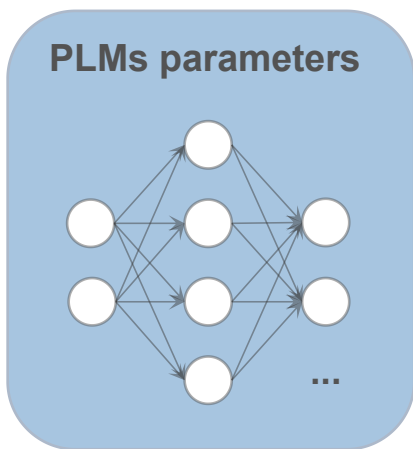

Question	Answer	Dataset
You cannot be in Vienna and Paris at the same time.	Yes 	CSQA2.0
july always happens in the summer around the world?	No 	CSQA2.0
Carrots contain large amounts of vitamin A.	True 	CREAK
Humans cannot eat fennel because it's poisonous.	False 	CREAK

 **How to effectively seize high-quality commonsense knowledge ?**

Background

- **Commonsense fact verification**: verify through facts whether a given commonsense claim is correct or not
 - derive solely from question & implement reasoning on top of it
- Current Methods:
 - Direct use of knowledge preserved in pre-trained language models (**PLMs**) parameters
 - Resort to external knowledge bases, either **structured or unstructured knowledge**

Structured knowledge

Unstructured knowledge

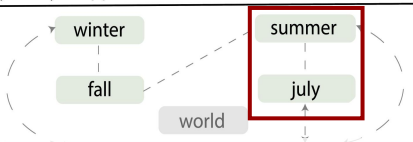

Challenges

- Previous methods heavily rely on **reasoning paths** between question and candidate answers
- Structured knowledge suffers from **sparsity and limited coverage**
- Unstructured knowledge undergoes **noisy issues**

Challenges

- Previous methods heavily rely on **reasoning paths** between question and candidate answers
- Structured knowledge suffers from **sparsity and limited coverage**
- Unstructured knowledge undergoes **noisy issues**

Question	july always happens in the summer around the world?
Knowledge	 <p>✓✓ In the Southern Hemisphere, seasons are in reverse to the Northern Hemisphere, with summer falling in December, January, and February, and with winter falling in June, July, and August.</p> <p>✗ The summer is short; July and August are the warmest months. There are usually two to three warm periods during the summer, when the average temperature is between at daytime.</p>
Answer	No

Challenges

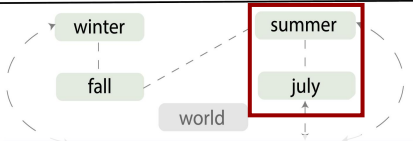

- Previous methods heavily rely on **reasoning paths** between question and candidate answers
- Structured knowledge suffers from **sparsity and limited coverage**
- Unstructured knowledge undergoes **noisy issues**

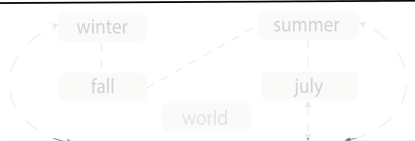

Question	july always happens in the summer around the world?
Knowledge	<p>✓✓ In the Southern Hemisphere, seasons are in reverse to the Northern Hemisphere, with summer falling in December, January, and February, and with winter falling in June, July, and August.</p> <p>✗ The summer is short; July and August are the warmest months. There are usually two to three warm periods during the summer, when the average temperature is between at daytime.</p>
Answer	No

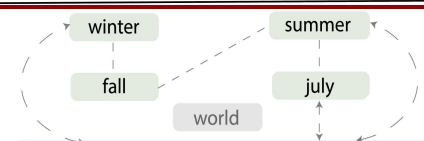

Question	july always happens in the summer around the world?
Knowledge	<p>✓✓ In the Southern Hemisphere, seasons are in reverse to the Northern Hemisphere, with summer falling in December, January, and February, and with winter falling in June, July, and August.</p> <p>✗ The summer is short; July and August are the warmest months. There are usually two to three warm periods during the summer, when the average temperature is between at daytime.</p>
Answer	No

Challenges

Decker: Overview

- **Knowledge Retrieval Module**: retrieve heterogeneous knowledge based on the input question
- **Double Check Module**: filter and make a double check over the heterogeneous knowledge
- **Knowledge Fusion Module**: obtain a refined knowledge representation and predict the final answer

Decker: Knowledge Retrieval Module

Knowledge Retrieval Module

➤ KG Retriever:

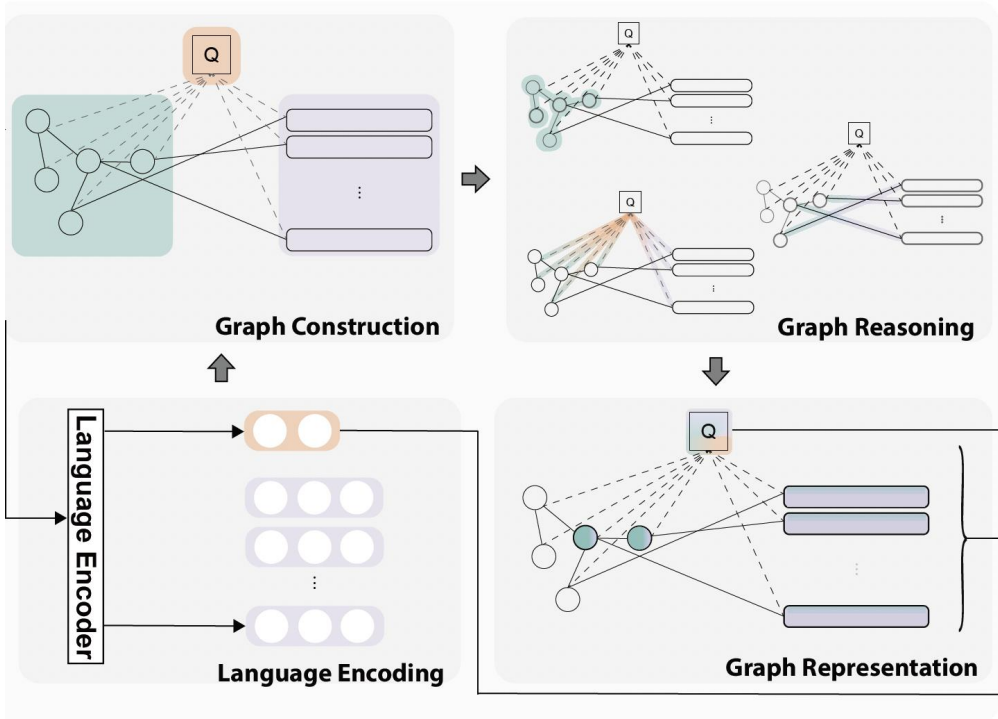

- ❑ execute entity linking between the question and the pre-defined knowledge graph
- ❑ add any bridge entities that are in a 2-hop path between any two linked entities
- ❑ extract all the edges that join any two nodes

➤ Fact Retriever:

- ❑ employ a pre-trained information retrieval model Contriever
- ❑ calculate relevance scores between the question and candidate texts from the pre-defined corpus

Decker: Double Check Module

Double Check Module

- **Language Encoding**: employ a PLM to encode the input question and facts
- **Graph Construction**: construct an *integral graph*
 - ❑ four types of edges: concept-to-fact, concept-to-concept, question-to-fact, question-to-concept
 - ❑ initialize the node embeddings and align the dimension
- **Graph Reasoning**:
 - ❑ adopt relational graph convolutional network (R-GCN)

$$h_i^{(l+1)} = \sigma \left(\sum_{r \in \mathcal{R}} \sum_{j \in N_i^r} \frac{1}{c_{i,r}} W_r^{(l)} h_j^{(l)} + W_0^{(l)} h_i^{(l)} \right)$$

Decker: Knowledge Fusion Module

➤ Multi-head Attention Pooling:

$$\text{Attn}(Q, K, V) = \text{softmax} \left(\frac{QK^T}{\sqrt{d_k}} \right) V,$$

$$\text{head}_t = \text{Attn} \left(H_q W_t^Q, H_k W_t^K, H_k W_t^V \right),$$

$$\text{MHA}(H_q, H_k) = [\text{head}_1, \dots, \text{head}_N] W^O,$$

➤ Answer Prediction:

$$l = \text{MLP} \left([q_{enc}; K_a; q_{enc}^{(L)}] \right) \in \mathcal{R},$$

initial question embedding

pooled knowledge representation

enriched question representation

Datasets

➤ CSQA2.0:

- ❑ collected through gamification
- ❑ 14,343 assertions about everyday commonsense knowledge
- ❑ train/dev/test: 9,282/2,544/ 517

➤ CREAK:

- ❑ generated by crowdworkers based on a Wikipedia entity
- ❑ 13,000 assertions about entity knowledge
- ❑ encompass 2,700 entities
- ❑ train/dev/test/contrast: 10,176/1,371/1,371/500

Main Results

- Decker **outperforms** the strong baselines and achieves **comparable** results on CREAK test set
- Decker **surpasses** the current state-of-the-art model on CREAK contrast set
- Decker **exceeds** the billion parameter-level model (3B) with only about **10% of the parameters** (449M)
- Decker enjoys a **lightweight** architecture without mixed data from multiple tasks during training

Model	#Total Params.	Single-task Training	CREAK Test	Contra	CSQA2.0 Test
Human [27]			-	92.2	-
GreaseLM [47]	~359M	✓	77.5	-	-
UNICORN [25]	~770M	✗	79.5	-	54.9
T5-3B [30]	~ 3B	✗	85.1	70.0	60.2
RACo [43]	≥ 3B	✗	88.6	74.4	61.8
DECKER (Ours)	~449M	✓	88.4	79.2	68.1

Analysis

- **Combination of heterogeneous knowledge** and the components of Decker are both non-trivial.
- Augmented **interaction with the question** helps refine the enriched knowledge.

Model	Accuracy
DECKER	89.5
Knowledge Retrieval	
w/o facts	87.8(↓ 1.7)
w/o knowledge graph	87.9(↓ 1.6)
w/o both	86.1(↓ 3.4)
Graph Construction	
w/o question node	89.3(↓ 0.2)
w/o edge type	87.6(↓ 1.9)
w/o concept-to-fact edges	88.1(↓ 1.4)
w/o question-to-fact edges	88.8(↓ 0.7)
w/o concept-to-concept edges	88.3(↓ 1.2)
w/o question-to-concept edges	89.1(↓ 0.4)

Model	CSQA2.0	CREAK
DeBERTa _{large}	67.9	86.1
DECKER	70.2(↑ 2.3)	89.5(↑ 3.4)

Model	Interaction	Accuracy
DeBERTa _{LARGE}		86.1
w/ max pooling	✗	87.5
w/ mean pooling	✗	86.7
w/ attention pooling	✓	88.9
w/ MHA pooling	✓	89.5

Interpretability: Case Study

Question: Whales can breathe underwater?

①

F1: Some species such as the sperm **whale** are able to stay submerged for as much as 90 minutes. They have blowholes (modified nostrils) located on top of their heads, through which **air** is taken in and expelled.

F2: Beluga **whales** often accompany bowheads, for curiosity and to secure polynya feasible to **breathe** as bowheads are capable of breaking through ice from **underwater** by headbutting.

F3: **Whales** have evolved from land-living mammals. As such whales must **breathe air** regularly, although they can remain submerged **underwater** for long periods of time.

F4: Beluga **whales swim** on the **surface** between 5% and 10% of the time, while for the rest of the time they **swim** at a depth sufficient to cover their bodies. They do not jump out of the water like dolphins.

F5: **Whales** are **air-breathing** mammals who must **surface** to get the **air** they need. The stubby dorsal fin is visible soon after the **blow** (exhalation) when the **whale surfaces**, but disappears by the time the flukes emerge.

C1: whale

C2: breathe

C3: underwater

C4: water

C5: blow

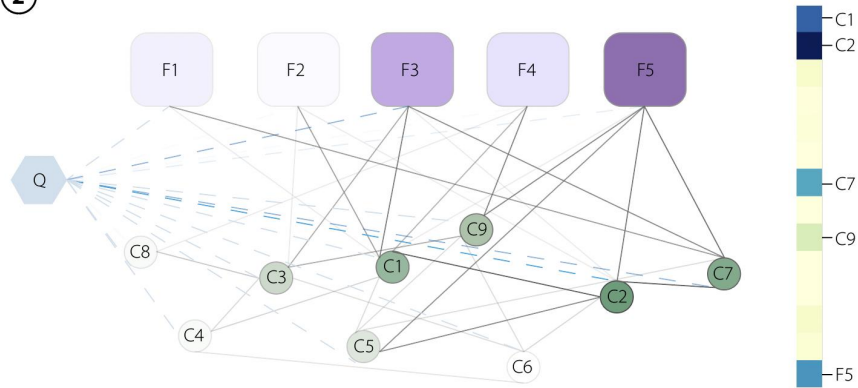

C6: dive

C7: air

C8: swim

C9: surface

②

③

✓✓ F5: Whales are air-breathing mammals who must surface to get the air they need. The stubby dorsal fin is visible soon after the blow (exhalation) when the whale surfaces, but disappears by the time the flukes emerge.

DECKER: False ✓

Baseline: True ✗

Summary

➤ Contributions

- ✓ Decker **bridges the gap between heterogeneous knowledge** in an **effective** and **intuitive** pattern.
- ✓ Decker enjoys its strength and superiority in various dimensions, including its **excellent performance**, **lightweight architecture**, and **favorable interpretability**.

➤ Insights

✨ **Diversity** of knowledge is essential in boosting model capabilities.

💡 **Refinement** of knowledge also plays a vital role.

🤔 How to **merge and refine diverse knowledge in an effective way** remains to be further explored.
